

Experiment Report

Jinna Cui

12.12 - 12.18

This week, I mainly focus on two parts. I still run experiments on caffe. Besides, I do some image process experiment about enhancement and filtering. Some experiment details and conclusions can be seen in Jinna_experiment_report.pdf.

Besides, as we haven't download successfully the new dataset, I reorganized Kaggle Dataset again, it contains about 30 thousands images, I picked about 20 thousands images from each category out as training database and the rest images are test database. But Kaggle contains only 30 thousands images, I wonder that whether the small database is persuasive.
